

Enhance your workflow

Geneious provides powerful bioinformatic tools that have been developed using years of experience and expertise, speeding up the process of finding the next star candidate. Geneious equips R&D teams with a robust and secure sequence management and analysis system that will organize and consolidate high throughput data, even as more data is created, so time isn't wasted and files aren't lost.

- Significantly speed up candidate selection
- Sensible and secure IT infrastructure for a fraction of the cost
- Consolidate data in a secure and shareable environment
- Create more opportunities by leveraging vast datasets, including NGS outputs
- Reduce human error
- Easily configure and enhance existing systems
- Access to a whole team of bioinformaticians, scientists and IT with one purchase.

Collaborate

Get the right information at the right time with a central database searchable across the organization.

Scale

Scale up quickly and efficiently, with additional capacity delivered on demand.

Configure

Enhance existing workflows with an advanced API and a highly configurable system. Assign users according to their role.

Compete

Innovate faster with large scale computational analysis in the cloud.

Take control with Geneious, find out more:

“IONTAS had a requirement for processing large quantities of data from both our service based antibody discovery projects and our internal developments. The collaboration has been close and resulted in Geneious Biologics delivering a software solution that has significantly improved the efficiency and scope of our sequence analysis workflows during therapeutic antibody discovery.”

Peter Slavny, Group Leader at IONTAS
